iFind

Project Document Search Tool

iFind is a fully integrated tool specifically developed for a fast and categorized search of your query item throughout **ALL** project drawings & documentation at a touch of a button.

By categorizing the search results, and providing the ability to view and/or print the desired documents, iFind gives you the information you are seeking immediately! Eliminating the time spent searching through hundreds or even thousands of files spread across various binders, folder, manuals, etc...

iFind provides the ability to search by specific identifiers such as motor, device, wire or IO numbers or by entering a descriptive search.

iFind will generate a categorized list of all documents, drawings, lists, etc... referencing your search item. By selecting the desired document, you have the ability to open and view it immediately by one click.

By providing an instant and categorized list of **All** documents you may need, and having immediate access to any of them, iFind is a remarkable tool for both the Engineering and Maintenance departments significantly reducing access time to information, implicit to action, reducing downtime and increasing productivity.
